# EXact-Cut<sup>™</sup> Bsal Restriction Endonuclease

For Research Use Only. Not Intended for Diagnostic or Therapeutic Use.

Catalog Number: EXNA007 Size: 500 Units

More information: info@exreprotein.com

## Product Details

and time saving DNA digestion in 5-15 m restriction enzymes, our entire range of E	ase is engineered for high specificity, reduced star activity, hinutes. To simplify experimental design using multiple EXact-Cut™ restriction endonucleases are 100% active in ou otimized for single-tube reactions along with digestion and			
5'GGTCTC(N)₁↓3' 3'CCAGAG(N)₅↑5'				
One unit is defined as the amount of enzyme required to digest 1 $\mu$ g of $\lambda$ DNA in 1 hour at 37°C in a total reaction volume of 50 $\mu$ L.				
1X EXact-Cut™ Buffer Incubate at 37°C Refer to Protocol for reaction setup				
<ol> <li>Incubate at 80°C for 20 minutes</li> <li>Add appropriate volume of 6X Gel Loading Dye, according to the reaction system</li> </ol>				
EXact-Cut™ Bsal (10 Units/µL) EXact-Cut™ 10X Buffer 6X Gel Loading Dye, Purple	500 Units 1 mL 1 mL

Incubate at 80°C for 20 minutes</li> <li>2. Add appropriate volume of 6X Gel L</li> <li>EXact-Cut™ Bsal (10 Units/µL) EXact-Cut™ 10X Buffer</li> </ul>			

## **Storage and Preparation**

Shipping	Shipped on blue ice.
Stability and Storage	Store at -20°C for up to 24 months.

## Protocol

## Protocol for Rapid DNA Digestion

1. Add the following components on ice in the indicated order:

	Plasmid DNA	PCR Product	Genomic DNA
DNA	≤ 1 µg	≤ 0.2 µg	≤ 5 µg
EXact-Cut™ 10X Buffer	2 µL	3 µL	5 µL
ddH <sub>2</sub> O, make up to final volume indicated:	20 µL	30 µL	50 µL
Exact-Cut™ Bsal	10 Units	10 Units	30-50 Units

**Note**: DNA should be free of phenol, chloroform, ethanol, EDTA, detergents or high concentrations of salts. For compatibility with other common buffers, see the chart on page 2.

- 2. Gently mix or flick the tube to mix (do not vortex), then immediately follow with a quick spin-down in a microcentrifuge.
- 3. Incubate at 37°C for the indicated sample type: plasmid DNA (15 minutes), PCR product (15-30 minutes), or genomic DNA (30-60 minutes)
- 4. Optional: inactivate the enzyme at 80°C for 20 minutes and add an appropriate amount of 6X Gel Loading Dye, according to the reaction system.

## Protocol for Multiple Digestion of DNA

- 1. Use 10 Units of each enzyme and scale up to the reaction conditions accordingly.
- 2. The combined volume of the enzymes in the reaction mixture should not exceed 1/10 of the total reaction volume.
- 3. If the enzymes require different reaction temperatures, start with the enzyme requiring the lowest temperature, followed by the next enzyme(s) and incubate at the higher temperature.
  - Note: For total reaction volumes > 20  $\mu$ L, the incubation time should be increased accordingly in a water bath.

Functional Test	i	A 20 μL reaction in EXact-Cut Buffer containing 1 μg of pPIC9K DNA and 10 Units of EXact-Cut Bsal incubated for 15 minutes at 37°C results in complete digestion as determined by agarose gel electrophoresis.						
Digestion-Ligation		At the optimal reaction temperature, the DNA was digested using 10 Units of EXact-Cut Bsal and the digestion product was recovered. The DNA fragments were ligated using an appropriate amount of T4 DNA Ligase at 22°C. After the ligation product was recovered, it was able to be recut with EXact-Cut Bsal.						
Non-Specific Endonuclease Act Test	ivity \	At the optimal reaction temperature,10 Units of EXact-Cut Bsal was incubated in 20 $\mu$ L reaction volume in EXact-Cut Buffer with 1 $\mu$ g of supercoiled plasmid DNA for 4 hours. Undigested, supercoiled plasmid DNA was detected using agarose gel electrophoresis.
